

ZANUSSI

TwinTech® Cooling

Two separate cooling zones

TwinTech®

Twin cooling systems ensuring food stays chilled, crisp and fresher for longer. Separate cooling systems for the fridge and freezer provide the ideal humidity in each compartment, so food doesn't dry out and odours don't cross over – locking in the natural freshness. So food stays fresher for longer. TwinTech® also means NoFrost With Zanussi's clever NoFrost function you will never have to defrost again!

SpaceFlex

The supertall SpaceFlex fridge freezer has extra height at the top for additional storage and the large adjustable compartments let you customise storage space – always room for putting away the weekly shop. Large capacity made easy! The DynamicAir system keeps the temperatures the same throughout the fridge, which is important for preserving food. The compact fan works to move cool air around for a consistent cool.
